

Attachments for Zoom Booms

Zoom Boom Attachments - In the past 10 years, Skyjack was purchased by the Linamar Corporation, a leading producer of precision machined components, assemblies and modules. At present, Skyjack has production facilities in the US, Canada and Hungary with added support offices in Asia and Europe.

Skyjack became the industry leader of aerial hoist machinery by combining features like for example durability, quality and serviceability, making their scissor hoists recognized worldwide for product efficiency and reliability. Skyjack proudly produces a full line of self-propelled scissor hoists. Their elevated work heights reach nearly 56 feet. The company's current Boom lift model series has telescopic booms ranging from 45 feet to 71 feet. Skyjack has plans to further develop their boom lift product line. The business is still a leading player in the trade adjusting fast to the continually changing needs of all of their clients.

Skyjack's acquisition of Carelift Equipment was done in August of the year 2007. Most recently, their acquisition of Volvo's Material Handling Equipment business expands Skyjack's Telehandler product offering. The resulting Zoom Boom and VR series telehandlers along with the additional production capacity further guarantees the company's growth and success.

With products produced, advertised and supported worldwide, Skyjack is proud to engineer and make dependable hoist solutions to all their clients.
