

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are utilized on lift masts in order to help them operate in difficult environmental surroundings. Lift masts are frequently subjected to oscillations, shocks, high dynamic and vibrations and static loads. This apparatus is often exposed to environmental influences like cold, heat, dust, moisture, contamination and aggressive ambient air. Thus, the lift masts' guidance arrangements need to be particularly robust and have a specific high load carrying capability.

Carriage rollers have been developed as the answer for functioning in different environmental conditions. These bearings are the answer where the guidance arrangements of the lift masts should be economical and maintain operational security while having the ability to deal with a specifically high load carrying capacity.
